Electric Fuel Pump System Install - Fueled Up How do you plumb the system and fit your classic Ford with an electric fuel pump, filter, and lines? Aeromotive's classic Mustang fuel system.. Electric fuel pump Is working good so far Had i remembered to install an eccentric i would have used a mechanical pump since they are good to about 550hp with.. On my 69 & 70 Mach 1's, I made a sheet metal bracket which mounted the pump to the trunk floor between the diff housing & the tank, just to the right side.

My only concern is the rear exhaust isn't installed yet and i'm hoping it doesn't interfere with each other.. 8@105mph85 Mustang NHRA Stocker under construction, 302 5 speed59 Meteor (Canadian Ford) 2 dr sedan 332, auto74 F350 ramp truck 390 4spdrockafellzGearhead Posts: 1459From: San Lorenzo, CA, USARegistered: Aug 2001posted 09-30-2002 12:29 PM Well, I guess i'm gonna have to pull the pump off.. Also, if you pump is hanging below the rocker panels, it is very likely to get damaged by a speed bump, or flying rocks. [Sony Vegas Pro 11 تحميل The Project File](#)

Looks like it's sitting a little too far away from the tank We did put a filter between the tank and the pump though.. Rory McNeilGearhead Posts: 1889From: Surrey, B C CanadaRegistered: Nov 2000posted 09-30-2002 12:15 PM Well, normally as close to the tank, & below the tank is preferable.. I HAVE seen the occasional electric pump in the engine compartment, but I certainly wouldn't recommend that.. -----78 Fairmont 428 4 speed 10 20@130mph80 Fairmont 302 5 speed 12.

My dad and I put ours on the left frame rail right where the frame levels out (about where the left muffler should be.. So it's about 3 feet from the tank We mounted it as high as possible on the frame rail but it looks pretty low..) We couldn't think of any other place to mount it thinking either the rear end or future muffler pipes will hit it if we mounted it where the frame rails go over the axles.. We used the Earl's hi-flow fuel filter I guess we're gonna have to make a custom bracket to mount right above the rear differential.. Locations in the trunk could be the rear

fenderwell or on the trunk floor Some people attach a bracket as close to the fuel outlet of the tank and mount them there.. Did you install a fuel filter between the tank and the pump? It is recommended by most pump makers..
